

# Installation

---

```
pip3 install -r requirements.txt
```

## Use the Skript

---

Make sure to have a valid Internet connection!

```
python3 main_ingest.py #to update all the items in the Database, deletes all old
Results inside the Database
python3 make_resultsfiles.py # generate all the resultsfiles from the state of
the Database
```

## Add new Resultfiles

Add the path to the new file inside the `config.yaml` file like so: Before:

```
ResultFilesSetup:
  race_name2result_file:
    { "Plattenhardt": "../01_Data/ingest/Ergebnis 15.08.2021.xlsx" }
```

After:

```
ResultFilesSetup:
  race_name2result_file:
    {
      "Plattenhardt": "../01_Data/ingest/Ergebnis 15.08.2021.xlsx",
      "Vaihingen": "../01_Data/ingest/Ergebnis 16.08.2021.xlsx" # new
    }
  Resultfilepath
```
